

CountryInfoExplorer

This java application interacts with a web service called **CountryInfoService**. This service provides information about countries, continents, currencies, languages, and related details. The client application offers various functionalities to query and retrieve information from the service.

Usage:

1. Running the Application:

- Execute the **DataFlexCountryClient** Java class. Upon execution, the application presents a menu with different options.

2. Menu Options:

- Each menu option corresponds to a specific query or action related to country information.
- Enter the corresponding number to select an option.
- Options range from viewing continents, currencies, and languages to finding details about countries.

3. Menu Navigation:

- Once an option is selected, follow the on-screen instructions to provide necessary inputs.
- Input may include ISO codes, country names, or currency codes depending on the selected option.

4. Exiting the Application:

- To exit the application, select option **0** from the menu.
- The application will terminate upon selecting this option.

Menu options:

1. See all continents by name
2. See all continents by code
3. See all currencies by name
4. See all currencies by code
5. Find currency by code
